

# BonBits™

## Biomimetic Granules

**The only synthetic bone graft resembling human bone in composition and micro-/nano-structure**

BonBits™ is composed of HA and collagen in the same ratio and the same microstructure as natural bone.

**Uniquely bioinspired.™**

**Like other BonGold™ family products:**

- Provides osteoconductive and osteoinductive matrix when mixed with BMA
- Can be mixed with auto-graft, BMA, or blood
- Multiple applications in filling bone voids, fractures, and fusion

# BonBits™

## Biomimetic Granules

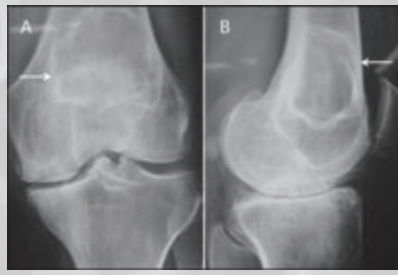

### Clinical Use Locations

- **Spine: Fusion, void filling, scoliosis**
- **Trauma: Fractures, pseudarthrosis**
- **Tumors/Bone cysts**
- **Joints: Hip and knee revisions**
- **Foot/Ankle: Fractures, fusion**
- **Hand/Wrist: Fractures**

### Clinical Applications

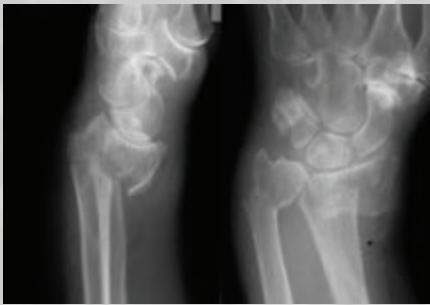

**Foot/Ankle: Fracture**

**Bone Tumor Defect Repair**

**Joint Revision**

**Distal Radius Fracture**

**Spine Fusion**

*"Decreases time to fusion up to 1.5x faster radiographically."*

—Dr. Nihar Ghate  
(Indiana Regional Medical Center, PA)
